Undergraduate Internship Report 1

Program: B.E
Department: CSE(AI)
Academic Year: 2023–2027

Internship Duration: 12/9/2025-12/11/2025
Name of Student: PITTAM NIKHITHA
Register Number: 192372194
Batch: 2023-2027
Internship Organization: Kaynes Technology, Mysuru
Supervisor in Company: Marimuttu J

1. Internship Completion Certificate

Date: 12-11-2025

TO WHOMSOEVER IT MAY CONCERN

This is to certify that Ms. Pittam Nikhitha, (192372194) who is pursuing her BE (Bachelor of Engineering) from SIMATS Engineering, has successfully completed her Internship Training at Kaynes Technology India Limited from 09-09-2025 to 12-11-2025.

During the course, She has been actively engaged in all the aspects of Electronic Printed Circuit Board Assembly, ICT, FT and Programming.

We found Ms. Pittam Nikhitha to be motivated, hardworking, and interactive. She has sincerely worked on her assignments, and her performance was rated as GOOD.

We take this opportunity to wish her good luck and success in all her future endeavours.

For **Kaynes Technology India Limited**

2. Student Declaration

I PITTAM NIKHITHA, a student of CSE-AI, solemnly affirm that the internship experience documented in this report reflects my direct involvement in a formal organizational setting, actively engaged in industry-relevant operations.

During the internship period from 12-09-2025 to 12-11-2025, I was entrusted with tasks and responsibilities that were integral to the company's ongoing functions. The insights and observations included herein are a true representation of the work culture, technical exposure, and professional interactions I encountered.

This report has been prepared based on actual experiences and contributions during my time with the organization. I have abided by the professional conduct expected of an intern and ensured that the contents of this document are factual, original, and aligned with the intended academic and industrial learning objectives.

3. Company Overview

- Name of the Company: Kaynes Technology
- Nature of Business : Electronics Manufacturing Company
- Brief History & Overview: Kaynes Technologies India Limited is a leading Electronics Manufacturing Services (EMS) company in India, providing end-to-end solutions across the electronics value chain. Established with a vision to deliver high-quality electronic manufacturing and design services, the company has grown significantly by adopting advanced technologies, automation, and stringent quality standards.
- Locations: Mysuru, Cochin, Mumbai
- Products :Manufacturing PCB
- Major Clients: Atomberg, Siemens

4. Internship Role and Objectives

- Internship Title: Quality Testing
- Department Assigned: Godhavari Line (Testing)
- Supervisor: Marimuthu J
- Internship Objectives (as provided by the company):
 1. To develop an understanding of real-time manufacturing environments, automation systems, and data-driven decision-making processes.
 2. To enhance technical, analytical, and professional skills through hands-on learning, industry interaction, and adherence to industrial standards.
 3. To provide practical exposure to industrial processes, electronic systems, and technology-driven workflows relevant to computer science and AI-based applications.

5. Work Description

- Tasks Assigned: : Observed and assisted in electronics manufacturing and system integration processes, Studied embedded systems, automation workflows, and data flow in industrial environments
- Tools/Technologies/Software Used: Python (basic exposure for data handling and analysis), Embedded systems concepts and microcontroller basics, Industrial automation tools and monitoring systems, MS Excel / documentation tools for reporting.
- Real-Time Projects Participated In (with details): Assisted in industrial electronics and automation projects involving system monitoring, functional testing, and performance validation. Gained hands-on exposure to smart control systems, data-driven electronic solutions, and basic programming activities used in production environments. Participated in In-Circuit Testing (ICT) to verify component-level functionality and detect manufacturing defects in electronic boards.
- Meetings/Interactions Attended: Attended daily briefing meetings with the reporting supervisor to understand assigned tasks, workflow priorities, and safety guidelines. Participated in technical discussions with engineers regarding PCB assembly, functional testing, ICT procedures, programming-related firm ware activities. Took part in quality assurance and testing review meetings to understand defect analysis, testing outcomes, and corrective actions.
- Key Responsibilities & Daily Activities: Following industrial safety standards and operational guidelines and Assisting engineers during testing, monitoring, and inspection activities. Recording observations and preparing daily work logs and learning and applying technical concepts relevant to computer science and AI-based systems.

6. Learning Outcomes

- Industry Exposure Gained: Got practical experience in a real industrial setup, including electronics manufacturing, programming, automation systems, PCB assembly, testing, and quality checks of softwares.
- Skills Acquired (Technical/Managerial/Soft Skills): **Technical Skills:** Programming, functional testing, In-Circuit Testing (ICT), system monitoring, embedded systems. **Managerial Skills:** Time management, documentation, following industrial procedures. **Soft Skills:** Teamwork, communication, problem-solving, and professional behavior.
- Understanding of Industrial Workflows: Learned how production, testing, and quality processes work together in an industrial environment while following safety and quality standards.
- Contribution to Team/Project (with measurable impact if possible): Helped with functional testing, ICT, monitoring, and documentation tasks, supporting the team in ensuring reliable electronic products.
- Comparison with Academic Learning: The internship helped connect theory with practice. Learned how concepts from computer science and AI & DS are applied in real-world industry projects.

7. Challenges Faced and Solutions

- Technical or Operational Challenges: Understanding how data-Driven electronics and automatic systems with work in real industrial setups, learning Functional Testing and ICT, Programming for new AI students.
- How they were resolved: Received guidance from supervisors and technical mentors to understand real-time systems. Practiced programming tasks, functional testing, and data monitoring under supervision to gain confidence.
- Feedback from Supervisor: Supervisor appreciated quick learning, active participation, and technical curiosity. Recognized ability to connect AI & DS concepts with industrial automation and testing tasks. Encouraged further exploration of embedded programming, data-driven monitoring, and smart system applications.

8. Reflection and Conclusion

- Overall Experience: The internship provided valuable hands-on exposure to industrial electronics, embedded systems, functional testing (ICT), and automation workflows, helping me understand real-world applications of AI, Data Science, and computer science concepts.
- Career Relevance of the Internship: The internship enhanced my technical and professional skills, showing how AI & DS knowledge can be applied in industrial automation, system monitoring, and data-driven electronic solutions.
- Suggestions for Future Interns: Be proactive in learning functional testing, ICT, and programming tasks, and observe industrial workflows carefully to connect academic knowledge with practical applications.
- Suggestions for College/Department (optional): Organize more workshops and practical sessions on embedded systems, IoT, and industrial automation to better prepare AI & DS students for industry-oriented internships.

10. Faculty Mentor's Remarks

This is to certify that the internship report submitted by Pittam Nikhitha has been reviewed and it is evident that the internship was undertaken at a bonafide industry. The work documented is satisfactory and relevant to the student's field of study.
